Greenshields Symposium - Transportation Research Board

Threat modeling, a key technique for architecting and designing systems securely, is a method that many SAFECODE members employ. This paper leverages SAFECODE members'™ insights to offer effective ways to better integrate threat modeling and provides a great resource for organizations that are looking to integrate threat modeling into their own development processes and teams.

The taxonomy of the fundamental human needs, and the ways in which these needs can be satisfied is developed by Manfred Max-Neef. This taxonomy is based on his work on Human Scale Development, and was published for the first time in 1986.

5 Allowing for the -55°C to +150°C temperature range, this minimum voltage requirement is usually set at about 2.5V to 3V by the manufacturer to guarantee specified performance limits. The voltage where the output actually falls out of regulation (called the dropout voltage) will probably be somewhere between 1.5V and 2.2V for a Standard regulator (it is dependent on both load current and ...

Linear and Switching Voltage Regulator Fundamental Part 1

Both fundamental and realized niches refer to the environmental position that species occupy in an ecosystem. Fundamental niches represent all the environmental conditions where a species is able to live, and the realized niche is where the species actually lives. Other names for these niches are precompetitive and postcompetitive, respectively.

Roundabout Design Guidance - Virginia Department of

The fundamental diagram of traffic flow is a diagram that gives a relation between the traffic flux (vehicles/hour) and the traffic density (vehicles/km). A macroscopic traffic model involving traffic flux, traffic density and velocity forms the basis of the fundamental diagram. It can be used to predict the capability of a road system, or its behaviour when applying inflow regulation or speed ...
