IMAPS 2017 is bringing together the entire microelectronics supply chain. The 50th Symposium on Microelectronics, IMAPS 2017 Raleigh, is offering 16 professional development courses (PDCs / Short Courses / Tutorials) on Intro to System in Package (SiP), 3D, Fan-out WLP, Copper Pillar Flip Chip, Electrical Modeling, Wire Bonding, Photonic Interconnects, Wide Band Gap Powerelectronics, and more.

Download this article in PDF format. System in package (SiP) is an invaluable tool for delivering compact silicon solutions. It allows different technologies to combine into a single package ...

## **11 Myths About SiP | Electronic Design**

One of the most significant market drivers in the resistor industry currently is the need for pulse-withstanding resistors. In some cases, design rules or time constraints may require the design engineer to overdesign his

circuit to accommodate a pulse event. In many other cases, this presents an ...

SPARC (Scalable Processor Architecture) is a reduced instruction set computing (RISC) instruction set architecture (ISA) originally developed by Sun Microsystems. Its design was strongly influenced by the experimental Berkeley RISC system developed in the early 1980s. First released in 1987, SPARC was one of the most successful early commercial RISC systems, and its success led to the ...

IBM Z is a family name used by IBM for all of its non-POWER mainframe computers from the Z900 on. In July 2017, with another generation of products, the official family was changed to IBM Z from IBM z Systems; the IBM Z family now includes the newest model the IBM z14, as well as the z13 (released under the IBM z Systems/IBM System z names), the IBM zEnterprise models (in common use the zEC12 ...

Introduction. Psoriasis is a common inflammatory and hyperplastic skin disease affecting approximately 1â€”2% of European-origin individuals (Parisi et al., 2013). Immunological and genetic studies are converging on an immunopathogenesis involving altered antigen presentation and dysregulated signal transduction involving NF-Î² activation, interferon signaling, and the IL-23-T helper type 17 ...

The flip chip technology was introduced by IBM in the early 1960s for their solid logic technology, which became the logical foundation of the IBM System/360 computer line []. Figure 2(a) shows the first IBM flip chip with three terminal transistors, which are Ni/Au plated Cu balls embedded in a Snâ€”Pb solder bump on the three I/O pads of transistor.
