Similar toxicities were observed in the initial patients treated with CD19 CAR T cells. In the first pediatric ALL patient treated 8, 9, it became clear that supraphysiologic cytokine elevation was responsible for the vast majority of symptoms, suggesting that these toxicities were the result of CRS. Investigators struggled with the then-accepted definition of and grading scheme for CRS.

ASTCT Consensus Grading for Cytokine Release Syndrome and

Therapy (often abbreviated tx, Tx, or T x) is the attempted remediation of a health problem, usually following a diagnosis. In the medical field, it is usually synonymous with treatment (also abbreviated tx or T x). Among psychologists and other mental health professionals, including psychiatrists, psychiatric nurse practitioners, counselors, and clinical social workers, the term may refer ...

Senile plaques (also known as neuritic plaques) are extracellular deposits of amyloid beta in the grey matter of the brain. Degenerative neural structures and an abundance of microglia and astrocytes can be associated with senile plaque deposits. These deposits can also be a byproduct of senescence (ageing). However, large numbers of senile plaques and neurofibrillary tangles are ...

TandAb anti-CD16A $\tilde{\text{A}}$ — anti-CD30 (AFM13) is a bispecific, tetravalent chimeric antibody construct with a murine anti-CD30 domain for the treatment of Hodgkin's Disease [1]. AFM13 specifically targets the activating receptor CD16A on NK cells and macrophages for tumor-cell killing of CD30+ targets expressed by Hodgkin and Reed Sternberg cells in HD patients [2].

Bispecific antibody based therapeutics: Strengths and

x Chimeric antigen receptor (CAR) T cell therapies are revolutionizing the management of B cell leukemias and lymphomas and are quickly being extended to numerous other malignancies. Two CD19 CAR T cell products were recently approved in the United States and Europe [1-4], and more indications are expected in the coming years.

There is a proposal to change the official name of the genus of the bacteria that cause Lyme disease from *Borrelia* to *Borrelia*, primarily to distinguish these strains from strains of *Borrelia* in the relapsing fever group (such as *B. miyamotoi*). However, this change would be controversial, is unnecessary, and is likely to cause even more confusion about an already confusing topic.
