The EM84 tuning indicator, or magic eye, was used to display the optimum tuning point of a receiver, or the recording level of a tape recorder.

EM84 @ The Valve Museum

A magic eye tube or tuning indicator, in technical literature called an electron-ray indicator tube, is a vacuum tube which gives a visual indication of the amplitude of an electronic signal, such as an audio output, radio-frequency signal strength, or other functions. The magic eye (also called a cat's eye, or tuning eye in North America) is a specific type of such a tube with a circular ...

Lutron | 3 Daylight sensor benefits Saves energy Reduces energy consumption by dimming or turning off electric lights based on the natural daylight entering the space
2Can deliver up to 60% lighting energy savings in some areas Provides comfort and convenience Helps maintain the proper light level for a space, so a space is never too dark or too bright

Daylight Sensor Design and Application Guide

(*1) This is a suggested optimum "fit" for each unit. The best match will depend on the input sensitivity specifications of your own amps/subs. While this app note is written for the case where a four-output unit is dedicated to subwoofer management, any miniDSP product with enough outputs can be used in this application.

For a spherical nanoparticle much smaller than the wavelength of light (diameter $d \ll \lambda$), an electromagnetic field at a certain frequency (ω) induces a resonant, coherent oscillation of the metal free electrons across the nanoparticle (\hat{r}). This oscillation is known as the surface plasmon resonance (SPR) [22, 24, 25, 32, 33, 34]. The resonance lies at visible frequencies for the noble metals Au, Ag ...
